---	---

Dear Mr. Zurita:

**RE: DETAILED ACTION - Election/Restrictions:**  
- Application Control Number: 09/877,094

In reply to your letter dated: 15 September 2004 and mailed 28-September-2004:

- A) I elect Invention I Claims 1-15 for examination with all figures except FIG. 9A.
- B) I withdraw Invention II Claims 16-19 from further consideration as it is a only a component to accelerate the invention as disclosed in the written description page 11 line 24 and does have separate utility.
- C) I traverse: Inventions: III Claims 20-34; Inventions: IV Claims 35- 46; Inventions: V Claims 47-60; Inventions; VI Claims 61-69; and Inventions: VII Claims 70-72 based on the following.

Referring to Fig. 8B, the invention consists of:

- Order pages (Category Order Pages and Item Description Pages)
- Order summary pages (Invoice and Invoice Picture Summary)

both in communication with the recorded selected item data 808. Claims 1, 20f, 35h, 47j, 63, and 70 record selected item data, and claims 6, 20a, 35a, 47a, 64, and 70 recall selected item data upon page load. On Fig 8B, the dashed lines with beveled arrowheads 807 shows the recorded data 808 transfers. Using either of order pages or order summary pages separately precludes communication between the two. Thus, in the invention the order pages and order summary pages work together and are not designed to work separately.

Order summary pages recall all previously selected item(s) according to claim 35a). There is provision to remove zeroed entries according to claim 40 but no means to add
